

Problem Statement: Multi-Channel Marketing Analytics & Attribution Framework

Organizations today invest across multiple acquisition channels such as email marketing, paid advertising, and social media campaigns. However, evaluating channel effectiveness and accurately measuring their contribution to customer conversions remains a key business challenge.

In this project, participants are required to build a marketing analytics framework to analyze campaign performance, evaluate customer journeys, and design attribution models that measure the impact of different marketing touchpoints. The objective is to generate data-driven insights that support campaign optimization, budget allocation, and strategic marketing decisions.

Scope of Work:

- Perform channel-level performance and ROI analysis across email, paid advertising, social media, and other acquisition channels
- Analyze customer journey datasets to identify high-impact conversion paths and acquisition trends
- Design and evaluate attribution models to measure the contribution of different marketing touchpoints
- Calculate and interpret key marketing KPIs such as Conversion Rate, ROAS, CAC, CTR, CPC, and Customer Lifetime Value
- Identify high-performing and underperforming campaigns based on efficiency and revenue contribution
- Generate actionable recommendations for budget reallocation and marketing performance optimization
- Build structured analytical workflows using SQL queries, dashboards, and/or analysis notebooks
- Document assumptions, methodologies, and attribution logic used during analysis

Expected Outcomes:

- A structured analytics framework for evaluating multi-channel marketing performance

- Clear attribution methodology with supporting assumptions and business justification
- Insights into customer acquisition behavior, campaign effectiveness, and conversion drivers
- Quantitative recommendations for marketing budget optimization and campaign improvement
- Business-facing dashboards or presentation decks highlighting key findings and strategic insights

Submission Format:

Participants must submit:

- SQL queries and/or analysis notebooks used for data analysis
- Documentation of data models, attribution methodology, assumptions, and analytical approach
- A dashboard or presentation deck highlighting key insights, KPIs, and recommendations
- Final optimization strategy supported by quantitative analysis and business rationale

Evaluation Criteria:

Submissions will be assessed based on analytical depth, SQL proficiency, attribution methodology, accuracy of insights, business interpretation, and clarity of presentation. Participants demonstrating strong problem-solving abilities, structured analytical thinking, and data-driven decision-making skills will be evaluated favorably.

*Candidates are encouraged to focus on both technical accuracy and business relevance while presenting their analysis and recommendations.

***Candidates are encouraged to complete and submit their work within one month of joining for priority evaluation.**
